Counter Terror News and Solutions OSLO BOMBING

SITREP (Situational Report)

- At approximately 3:30 p.m. on July 22nd, 2011. local time an explosion occurred in the center of the city of Oslo, Norway. Initial reports confirmed multiple deceased and injured. The two explosions ripped through a government block in downtown Oslo, destroying the windows of buildings, including one that houses the Prime Minister's office.
- The blast occurred in and around government offices in the city center with multiple areas of targeting centers.
- The attack in Oslo killed at least seven people and at least 85 people died when a gunman opened fire at a Norwegian island youth camp just hours later.
- Initial reports also suggest a VBIED (Vehicle Borne Improvised Explosive Device). According to sources in Norway, the explosive device was combined of ammonium nitrate fertilizer and aspirin powder that was turned into pure acetylsalicylic acid.
- According to Bob Ayers, former U.S. intelligence official, the quantity of fertilizer found on the suspect's premises - 1000 pound of grain - wouldn't have fit in one car. Two burned-out cars could be seen at the scene Friday, but police have not confirmed whether they were used in the attack.

Recommendations

X-Test™ security specialist personnel in conjunction with intelligence organizations are preparing to discuss the relevant vulnerabilities which made capable this catastrophic event.

- ✓ Physical Security
- ✓ Law enforcement
- ✓ Response time
- ✓ Training

X-Test™ security specialists provide the necessary tools and training in order to efficiently raise the scale of mitigation in order to detect and deter these types of security breaches from occurring. Are you prepared for a VBIED attack? We are!
