Israel HLS 2012: The 2nd International Conference November 11-14, Tel-Aviv

The 2nd International Conference on Homeland Security will bring together government officials, public authorities and HLS industry leaders from around the world to share their knowledge and experience. About 1500 representatives and delegations from Israel and some 50 countries are expected to attend.

At the conference, Tamar Group will introduce the revolutionary Bio-Explorers: is a bio-sensor based system capable of detecting an immense variety of prohibited materials (explosives, narcotics, cash, and even biological markers), with near perfect rates of detection – even at extremely low concentrations – and low false alarm rates, exceeding those of all currently implemented detection technologies.

Tamar Group is one of the main sponsors of Israel HLS 2012. Its management team, as well as experts of X-Test, a group member, will be present to offer their broad ranging capabilities, products and unique solutions in the field of explosives, and in enhancing the role of the human factor in security. These products include, among others: Training and calibration kits with inert explosives; XD software for screener training; an X-ray simulator and operation management; blasting mats that protect from fragmentation and shock waves produced by explosions; training courses and seminars for trainers, supervisors and controllers in law enforcement, government security agencies and private security companies.

As part of our global expansion activities and the due to the high demand for inert explosives and XD software and training, Tamar Group is seeking new distributors for the EU market. We invite all our partners, customers and interested parties to meet us at our booth and be part of our success.
